COSO ERM 2017 Principle	ROS Objective Centric
	ERM/IA Enabler
GOVERNANCE & CULTURE	
1. Exercises Board Risk Oversight—The board of directors provides oversight of the strategy and carries out governance responsibilities to support management in achieving strategy and business objectives.	A "Risk Oversight Committee", usually with C- Suite participation, selects top value creation and value preservation objectives for inclusion in the organization's OBJECTIVES REGISTER and makes initial decisions on who will be the OWNER/SPONSOR for each objective, the target level of risk assessment rigour, level of independent assurance, if any, and if yes who will provide independent assurance. The board oversees that process and makes final decisions on objectives, rigour and independent assurance level/provider. The need to populate the OBJECTIVES REGISTER WITH top value creation objectives puts more visibility on the process management uses to define the organization's value creation strategy and supporting objectives. Because in this framework the board is expected to review and agree with what has been included in the OBJECTIVES REGISTER, it forces additional review of management's process to identify strategy and articulate supporting end result objectives. Supplemental Reference: Board Oversight of Long-Term Value Creation and Preservation: What needs to change? Tim Leech, Conference
2. Establishes Operating Structures—The organization establishes operating structures in the pursuit of strategy and business objectives.	Board Director Notes Summer 2017 Operating structures play a key role identifying which executive is best positioned to be the OWNER/SPONSOR for top value creation and preservation objectives selected for inclusion in the organization's OBJECTIVES REGISTER. Supplemental Reference: ROS Sample Objective Centric Risk Management Policy
3. Defines Desired Culture —The organization defines the desired behaviors that characterize the entity's desired culture.	Decisions made on which objectives are included in the OBJECTIVES REGISTER, the accountability of each OWNER/SPONSOR to provide reliable/candid reports on residual risk/certainty status and the discipline provided by risk specialist groups and internal audit foster a culture of disclosure and candid discussion of top areas of exposure, – a key element of a healthy risk governance culture. Risk assessments and quality assurance reviews of risk assessments can

 reveal problems the current culture is/may be creating. Readers are encouraged to read the article in the reference link for a more in-depth discussion of board oversight of culture. Reference: Next Frontier for Boards: Oversight of Risk Culture, Parveen Gupta/Tim Leech, Conference Board Director Notes 2015 4. Demonstrates Commitment to Core Values The organization demonstrates a commitment to the entity's core values. Decisions made by management and the board on which objectives marant inclusion in the OBJECTIVES REGISTER, the wording of those objectives, and decisions on acceptability of residual risk/certainty linked to core value objectives provide transparency on how much real commitment there is to stated core values and ESG objectives. In cases where a company claims to have a specific core values objective and ESG objective. 5. Attracts, Develops, and Retains Capable Individuals—The organization is committed to building human capital in alignment with the strategy and business objectives. 5. Attracts, Develops, and Retains Capable Individuals—The organization is committed to building human capital in alignment with the strategy and business objectives. 5. 		external context when completing assessments.
This step was first articulated in ISO 31000 2009		
and has been amplified in COSO ERM 2017.		

7. Defines Risk Appetite —The organization defines risk appetite in the context of creating, preserving, and realizing value.	The objective centric approach includes a key step often overlooked by other methods – conscious decisions on which objectives are considered important enough to warrant formal risk management processes. Part of that decision is careful consideration of the potential risk of
	not achieving a specific strategy/objective in whole or in part. If an objective is not included in the OBJECTIVES REGISTER and not identified for formal risk assessment there is significantly
	heightened risk the organization/C-Suite/Board may not be aware of the residual risk status/certainty and acceptability of the residual risk/certainty position linked to that objective.
8. Evaluates Alternative Strategies—The	During the process of developing corporate
organization evaluates alternative strategies and	strategy the planning team will be fully aware
potential impact on risk profile.	that strategy options that will be presented to the C-Suite and Board will need to be translated
	in to specific end result objectives. Objectives considered important enough will be included in
	the OBJECTIVES REGISTER initiating conscious
	decisions who will be the OWNER/SPONSOR,
	level of risk/certainty assessment rigour for that
	specific objective, level of independent assurance
	on the assessment, if any, and who, if anyone,
	will provide independent assurance on
	risk/certainty status reports for the board. It is
	important to note that "STRATEGY" is often a
	macro level expression of an objective/intent.
9. Formulates Business Objectives—The organization considers risk while establishing the	Not only does objective centric ERM foster greater focus on formulation and articulation of
business objectives at various levels that align	end result objectives that align with strategy, it
and support strategy.	also requires decisions be made which objectives
and support strategy.	are important enough to warrant the cost of
	formal risk/certainty assessment, the level of
	risk/certainty assessment rigour, the level of
	independent assurance on risk/certainty reports
	on selected objectives from OWNER/SPONSORS,
	if any, and who, if anyone, will provide
	independent assurance on risk/certainty status
	reports from OWNER/SPONSORS.
10. Identifies Risk—The organization identifies	ROS training materials for risk specialists,
risk that impacts the performance of strategy and	workshop facilitators, and internal auditors
business objectives.	include training on over 30 methods to identify
	and assess risks with specific coverage of
	top/recommended/most reliable risk
	identification methods. Heavy emphasis is put on the need for "fact based information" on risks

PERFORMANCE	being assessed, as opposed to guesses made from participants that may, or may not represent the real situation. Quality assurance reviews of primary assessments done by risk specialists and internal auditors or other specialists can provide increased confidence important risks have been identified and reliably assessed.
11. Assesses Severity of Risk—The organization assesses the severity of risk.	In the ROS objective centric approach risks are assessed on Likelihood and Consequence with a default five level system producing a "RISK LEVEL". The recommended 5X5 likelihood/consequence table that produces specific RISK LEVELs adjusts for high impact/low likelihood risks that are sometime ignored in other approaches. The default risk level terms were developed in Australia in the mid-1990s. The RISK LEVEL of a specific risk defines the level/amount of management attention it should receive.
12. Prioritizes Risks —The organization prioritizes risks as a basis for selecting responses to risks.	Risks are prioritized by RISK LEVEL (see above) and a simple initial estimate of RED/AMBER/GREEN assigned for each risk. It is important to note that before risks are prioritized objectives have been prioritized during the process to populate the OBJECTIVES REGISTER, including defining value creation/erosion potential, target risk/certainty assessment rigour and target independent assurance levels.
13. Implements Risk Responses—The organization identifies and selects risk responses.	The methodology provides an easy to understand and use 9 category RISK TREATMENT PRINCIPLES model consisting of over 100 specific risk treatment elements to assist users. Simple, easy to understand "Trigger Questions" provide a succinct explanation of the full range of risk treatment/response elements that can be used to treat/respond to risks. These include risk transfer/risk finance/risk share/risk avoid as well as the more common risk mitigate, often referred to as "controls".
14. Develops Portfolio View —The organization develops and evaluates a portfolio view of risk.	By assembling a universe of the top value creation and value preservation objectives it allows the C-Suite and Board to see where high levels of retained risk exist on specific objectives and current state of action plans underway and the overall retained risk position across all the top objectives. One of the most important

REVIEW & REVISION	decisions in risk management is RESOURCE ALLOCATION. The objective centric approach provides specific actionable information for senior executives and boards on retained risk status on all objectives in the OBJECTIVES REGISTER that helps senior management and the board make better resource allocation decisions.
15. Assesses Substantial Change—The organization identifies and assesses changes that may substantially affect strategy and business objectives.	By assigning an OWNER/SPONSOR to each objective included in the OBJECTIVES REGISTER, and specifically assigning responsibility to monitor and report on the COMPOSITE RESIDUAL RISK/CERTAINTY STATUS for those objectives it increases the likelihood major changes in internal/external context, risks, risk treatment/responses and performance on the objective will be noted by the OWNER/SPONSOR and significant changes in COMPOSITE RESIDUAL RISK/CERTAINTY STATUS reported upward, particularly when the changes are potentially negative/dangerous.
16. Reviews Risk and Performance —The organization reviews entity performance and considers risk.	The CertaintyStatusline assessment approach specifically requires consideration of current performance information when deciding which objectives warrant inclusion in the OBJECTIVES REGISTER, and recording of best available performance information each time RESIDUAL RISK/Certainty STATUS information in individual CertaintyStatusline assessments are refreshed/updated. The link between risks, risk treatment/responses, and current performance for each objective assessed is visible and specifically tracked. Few other risk assessment methods we are aware of make this explicit link between objectives, risk assessment information, and related performance on the objective. This allows management to see how performance changes when risk treatment/response design is changed.
17. Pursues Improvement in Enterprise Risk Management —The organization pursues improvement of enterprise risk management.	In the objective centric approach we promote a key responsibility of specialist risk groups and internal audit is to continually evaluate the entire ERM framework, provide reports on framework performance, and recommendations for improvement to senior management and the board. The board of directors has specific responsibility to oversee the process and demand

	changes if they do not believe the framework is providing the board with materially reliable information on the true state of residual risk/certainty of achieving objectives. ROS offers a sample Strategy and Value Oversight Policy that details the roles of all the assurance players, including the board, CEO, STRATEGY AND RISK OVERSIGHT COMMITTEE, business units, risk specialists and internal audit.
INFORMATION, COMMUNICATION & REPORTING	
	The Containty Statualing accessory and an average
18. Leverages Information Systems—The organization leverages the entity's information and technology systems to support enterprise risk management.	The CertaintyStatusline assessment approach encourages users to seek fact-based information on risk likelihood, risk consequence, risk velocity, key risk indicators, and past and current performance on the objectives being assessed. When software is used data can be "wired" to the risk assessment to provide real time information, escalator triggers/alarms, and status alerts for OWNER/SPONSORs, senior management and boards. Tim Leech, CEO of Risk Oversight Solutions designed and successfully launched CARDmap software, the world's first integrated objective centric risk and assurance software in 1997. He sold that company in 2004. He is currently actively seeking software vendors now that want to offer objective centric/strong 1 st line risk management software.
19. Communicates Risk Information —The organization uses communication channels to support enterprise risk management.	By assigning each objective that is considered important enough/material enough to warrant the cost of formal risk/certainty assessment to an OWNER/SPONSOR, and assigning formal responsibility to report on status it forces/facilitates communication about retained risk/certainty status. On objectives where an independent assurance provider has been assigned, a key role is to report on the timeliness and reliability of residual risk/certainty status reports from OWNER/SPONSORS to senior management and the board.
20. Reports on Risk, Culture, and Performance— The organization reports on risk, culture, and performance at multiple levels and across the entity.	The OBJECTIVES REGISTER and CertaintyStatusline risk assessment approach provides a practical platform to report on residual risk/certainty status and performance. When culture is considered to be a risk to a specific objective OWNER/SPONSORS are encouraged to identify and assess it as a potential

risk. Specialist risk groups, where one exists, are
expected to provide reports on the overall
effectiveness and reliability of the ERM
framework. Internal audit, pursuant to IIA IPPF
professional standard 2120 should be providing
regular quality assurance reports to senior
management and the board on the effectiveness
of the entity's risk management framework.
